                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 INTERACTION WITH HUMAN FBLN1, AND INHIBITION OF E6-MEDIATED
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       similarity).
SUBCELLULAR LOCATION: Nuclear matrix-associated.
SUBCELLANEOUS: HPV16, in comparison to HPV types 6
MISCELLANEOUS: HPV16, in comparison to HPV types 6
Often associated with malignant genital cancers in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        protein to degradation. Those two functions presumably contribute to transforming activity (By similarity). Interaction with human FBLNI protein also seems to be linked to cell transformation. SUBUNIT: Forms a complex with E6-AP ubiquitin-protein ligase which interacts with human P53. Binds to human FBLNI and MPDZ (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SIMILARITY: Belongs to the papillomaviruses E6 protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DNA. Has transforming activity. Inactivates, with E6-AP ubiquitin-
protein ligase, the human TP53/p53 tumor suppressor protein by
targeting it to degradation. Binds and targets human MUPP1/MPDZ
 _TaxID=333760
